

# How to Hang Your Pictures

by Picture This! Framing & Gallery

In a sit-down area, hang your pictures lower so that people sitting can enjoy them—approximately 6 inches from the top of the chesterfield to the bottom of the picture. Smaller pictures may have to be hung higher unless they are hung in a grouping that works with the space.

In a standing or walking area, hang pictures at eye level to the centre of the picture. Use J-hook hangars, that are weight and size appropriate to hang the wire of the picture on the wall. The nail goes in at an angle for full support and a wall stud does not have to be hit.

Place rubber bumpers on the bottom 2 corners of the back of the picture. This will create an air space between your picture and the wall and also stop your picture from moving left to right.

These are general hanging tips and your circumstances may differ. Larger pictures may require 2 J-hook hangars or a larger hangar. Security clips are also available.
